

colour collection

enhance your home

Nulook's collection of inspiring colours has been created especially for powder coated aluminium joinery. With colours that reflect modern design trends, the range provides you with the flexibility to either complement or enhance the individual style of your home.

Your perfect colour solution

From the pureness of snow-driven whites to soft rich creams, dramatic reds and soothing blues, there's a colour just right for you and your home. Our impressive range of permanent colours makes the important decision of colour selection easy and failsafe. You'll know you've made the perfect choice.

Seamless colour transition

Complement your choice of colours on windows and doors to any other colour you want. You may follow the theme that has been applied to the exterior of your house or allow the interior colours to take the lead. Match the roof, make a feature of special areas, blend into the natural surroundings, stand out from the crowd... the decision is yours.

Long lasting colours

The **Interpon D1010 Premium** colours used on Nulook joinery has been formulated by Akzo Nobel, the world leader in powder coatings, specifically for New Zealand's diverse and extreme climatic conditions. Performance guaranteed for up to 15 years depending on application, you can trust the durability of our powder coated aluminium products.

Along with a little care and maintenance this will keep your home looking great for years to come.

When you are choosing your colour it is important to remember that different colours and finishes will perform differently depending on the aspect and environment. You may want to consider, for example, lighter colours for locations exposed to high UV levels to get the best performance from your powder coated Nulook joinery.

Care and maintenance instructions for Nulook joinery

Like any other painted surface, powder coated aluminium performs at its best when it is properly cared for.

Keeping the surface free from pollutants and environmental contaminants will give you the maximum benefit and long lasting performance from your coated surface. This is especially true where the surface is in a protected area that doesn't benefit from the natural cleaning properties of rainwater.

In normal urban environments a gentle clean with a soft brush and mild detergent followed by a fresh water rinse, every six months will keep your coating looking great for years. In areas of high pollution, such as industrial areas, geothermal areas or coastal environments, cleaning should occur every three months. In particularly hazardous locations such as beachfronts, severe marine environments or areas of high industrial pollution, cleaning on a monthly basis is recommended.

It is important to note that harsh chemicals and solvents can be harmful to a powder-coated surface and their use is not recommended.

For full care and maintenance instructions, please contact your Nulook fabricator or Freephone 0508 800 755.

Quality assurance and confidence

The **Interpon D1010 Premium** colours in this collection, manufactured by Akzo Nobel - the world leader in powder coatings, offer superior protection for your architectural aluminium.

Drawing on 30 years of experience in powder coating technology Akzo Nobel have used their expertise to develop a finish that is ideally suited to the local conditions found in New Zealand. The **Interpon D1010 Premium** range provides a durable, resilient colour finish to your Nulook joinery.

Akzo Nobel's **Interpon D1010 Premium** powder coatings are applied by National Aluminium Limited and supplied by Nulook. They are applied and tested to perform according to internationally recognised specifications, including AS3715 and WANZ Endurocolour.

Why powder coating?

Aluminium is an excellent material for use in joinery and construction. But, while it is a naturally resilient surface, it still needs some protection from the elements.

There are several ways to protect architectural aluminium such as anodising and powder coating, but choosing a powder coated aluminium finish will give your project both a stylish and durable look. A powder coated finish is also great for the environment as well as those involved in its application. Because the application process is free of solvents and other chemicals it is safe for the work environment as well as the natural environment.

Colours displayed on this colour card are a guide only and have been matched as close as possible to Interpon production standards under daylight conditions. We recommend that you request a production line prepared sample for final colour selection or approval.

* Conditions apply to warranty. A sample copy of the warranty is available on request.

Colour coordinated hardware

Consider enhancing your colour selection with colour coordinated hardware. We can help you create continuity and style with a range of options available for most colours.

Please consult with Nulook for further details.
